WOMEN

YOUTH

INTRODUCING

WEIGHTLESS,
UNRESTRICTIVE MOVEMENT

CHANNEL FLEX, XCEL'S NEWEST MATERIAL TECHNOLOGY, COMPLETELY REINVENTS THE WETSUIT EXPERIENCE. THIS EXTERIOR LIGHTWEIGHT, HYDROPHOBIC GRIDDED-MATERIAL BREAKS UP TENSION BY REDUCING FIBER AND WATER WEIGHT, ALLOWING A SURFER TO HAVE COMPLETE FREE-RANGE OF MOTION.

RADIANT REBOUND

REFLECTED INTERNAL
HEAT DISTRIBUTION

INTRODUCING XCEL'S METALLIC TECHNOLOGY

THIS LATEST ADVANCEMENT UTILIZES A METAL LINING UNDER THE TEXTILE THAT BLOCKS COLD TEMPERATURES FROM PENETRATING THE OUTER LAYER AND REFLECTS HEAT GENERATED WITHIN THE WETSUIT BACK TOWARDS THE BODY, KEEPING YOU IN A CONSTANT STATE OF WARMTH.

ECO INITIATIVES

From greener product technologies to cleaner operation, XCEL constantly strives to minimize our environmental impact.

LIMESTONE NEOPRENE

XCEL uses earth-mined limestone to replace processed petrochemicals in our neoprene, reducing dependence on petroleum and the harmful practice of processing it.

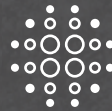

ECO CARBON BLACK

Carbon Black, one of the key ingredients of neoprene, can now be pyrolyzed from scrap rubber tires. This significantly reduces energy consumption and cuts CO₂ emission by 200g per wetsuit.

WATER-BASED GLUE

XCEL turned solvent-based laminating glue into water-based glue, eliminating harmful, volatile organic compounds (VOCs).

DOPE-DYED YARN

Dope-dyeing infuses dye pigments into a molten plastic solution to produce colored yarns without the dyeing process. This saves tremendous amounts of water while reducing energy consumption and water pollution.

NEOPRENE RECYCLING PROCESS

XCEL recycles as much neoprene production waste as possible, turning it into qualified production, thus minimizing the waste that goes to landfills.

RECYCLED POLYESTER

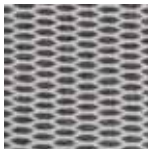

A wide selection of XCEL's fabrics are knitted with polyester yarns made from recycled plastic bottles. This helps reduce waste and material consumption at the same time.

PAHS MINIMIZED FORMULATION

XCEL uses neoprene rubber foam formulated to eliminate nearly all of the polycyclic aromatic hydrocarbon (PAHs) substances.

FEATURE GUIDE

CELLIANT BLACK HIGH PILE W/ HOLLOW FIBERS

Next generation TDC with enhanced heat-retaining minerals to maintain the warmth generated through the Infrared Process, with brushed hollow fibers enhancing the air particles trapped between your body and suit.

CELLIANT BLACK JACQUARD

Next generation TDC with enhanced heat-retaining minerals to maintain the warmth generated through the Infrared Process.

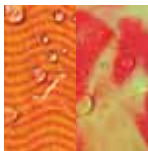

CHANNEL FLEX

Channel Flex is a Hydrophobic Channeled textile which has great stretch, reduced weight and repels water.

RADIANT REBOUND

This latest advancement utilizes a METAL lining under the textile that blocks cold temperatures from penetrating the outer layer and reflects heat generated within the wetsuit back towards the body, keeping you in a constant state of warmth.

THERMO DRY CELLIANT (TDC)

Rare, earth mineral-based fiber woven into a smart textile, which increases blood flow to muscle tissue by transferring the body's naturally produced heat into infrared energy. (Vasodilation)

THERMO LITE

A lightweight, thermo-generating yarn to maximize warmth without adding weight.

NANOPRENE LITE JAPANESE LIMESTONE

Eco-friendly, limestone-based neoprene with unrivaled memory and rebound that is lighter, warmer, and softer than the average neoprene.

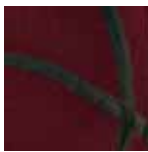

SUPERPRENE JAPANESE LIMESTONE

Eco-friendly, limestone-based neoprene that is super soft and light.

LIGHTWEIGHT, QUICK-DRY FIBER

Hydrophobic fiber repels water, minimizing absorption to stay lightweight during use.

FUSIONX TAPE

The next generation precision tape technology, applied by a machined heat-pressure process which bonds tape directly to suit ensuring maximum seam durability while eliminating need for excess glue that causes irritation.

ECO-FRIENDLY WATER-BASED GLUE

Water-based glue providing premium durability and bonds while being environmentally conscious.

TRIPLE GLUED AND BLIND STITCH

A water-tight seam construction where foam edges are glued multiple times before being slammed together creating air/water-tight seal, then stitched a quarter way through the foam to give it the strength needed.

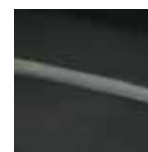

PERFORMANCE STRETCH

A multi-directional weave with spandex blend for superior stretch and performance.

STITCH-FREE POWER SEAM

Water-tight, stitch-free seam sealing technology providing lightweight, flexible, and durable warmth.

"S" SEAL

Poly-Urethane seam protection for the outer seam and rack appeal.

GLIDE SKIN COLLAR

Durable smooth skin collar creating a water-tight seal to prevent flushing.

DRYLOCK WRIST SEAL

Seamless doughnut-tapered cuff to prevent flushing.

NEXSKIN SEALS

Liquid neoprene seals at wrist and/or ankles to prevent flushing.

BACK KNEE FLEX GROOVES

Articulated pre-bent knee with grooves to prevent folding behind the knee.

WATERPROOF ZIPPER

Japanese YKK Aquaseal waterproof zipper with a high pressure waterproof rating.

SEMI-DRY ZIPPER

Zip closure with a silicone strip to seal preventing flushing.
